Q/A

Motivation

- ▶ IPv6 contributes $\sim 25\%$ [1] of traffic within Comcast.
- ▶ Swisscom reports $\sim 60\%$ [1] of IPv6 traffic is YouTube.
- ▶ IPv6 traffic largely dominated by YouTube [2].

Do users experience benefit (or suffer) from YouTube streaming over IPv6?

~ 100 dual-stacked SamKnows probes (~ 66 different origin ASes)

NETWORK TYPE	#
RESIDENTIAL	78
NREN / RESEARCH	10
BUSINESS / DATACENTER	08
OPERATOR LAB	04
IXP	01

RIR	#
RIPE	60
ARIN	29
APNIC	10
AFRINIC	01
LACNIC	01

Recommendations

Q/A

Research Contribution

- ▶ HE (RFC 6555) makes clients to prefer streaming YouTube videos over IPv6.
- ▶ Observed performance (both in terms of latency and throughput) over IPv6 is worse.
- ▶ Stall rates are low, bitrates that can be reliably streamed are comparable.
- ▶ When a stall occurs, stall durations over IPv6 are higher.
- ▶ Worse performance is due to GGC nodes that are IPv4-only.

This is the first study to measure YouTube content delivery over IPv6

Recommendations

Q/A

- ▶ Using YouTube v3 API [3].
- ▶ Video Selection Criteria:
 1. Video duration > 60s.
 2. Available in Full HD.
 3. No regional restrictions.
- ▶ List updated every 12h.
- ▶ Probes daily pull the list.

- ▶ The test supports non-adaptive and step-down playout modes only.
- ▶ Results are biased our vantage points (centered largely around EU, US and JP).

Recommendations

Q/A

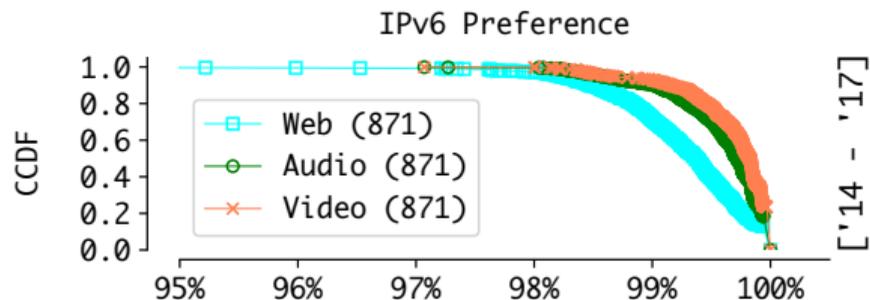

Success Rate

- ▶ Number of successful iterations to total iterations.
- ▶ The test executes once every hour (over both AF).

- ▶ 99% of probes achieve success rate of more than 94% over IPv4.
- ▶ 97% of probes achieve success rate of more than 94% over IPv6.
- ▶ Slightly lower success rates over IPv6 due to network issues closer to probes.

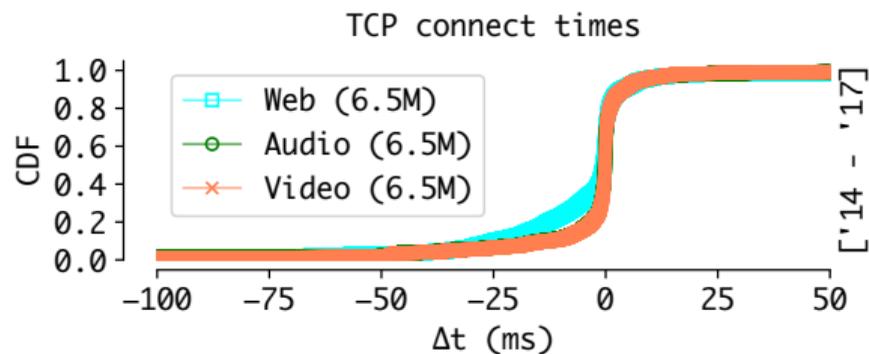

IPv6 Preference

- ▶ RFC 6724 [4] makes apps prefer connections made over IPv6.
- ▶ RFC 6555 [5] allows apps to fallback to IPv4 when IPv6 connectivity is bad.
- ▶ TCP connections over IPv6 are preferred at least 97% of the time.

Clients prefer streaming YouTube videos over IPv6

TCP connect times

- ▶ 63% of a/v streams (and 72% of the web connections) are slower over IPv6.
- ▶ 14% of a/v streams are at least 10 ms slower over IPv6.

Motivation

Success Rate

IPv6 Preference

TCP connect times

Startup Delay

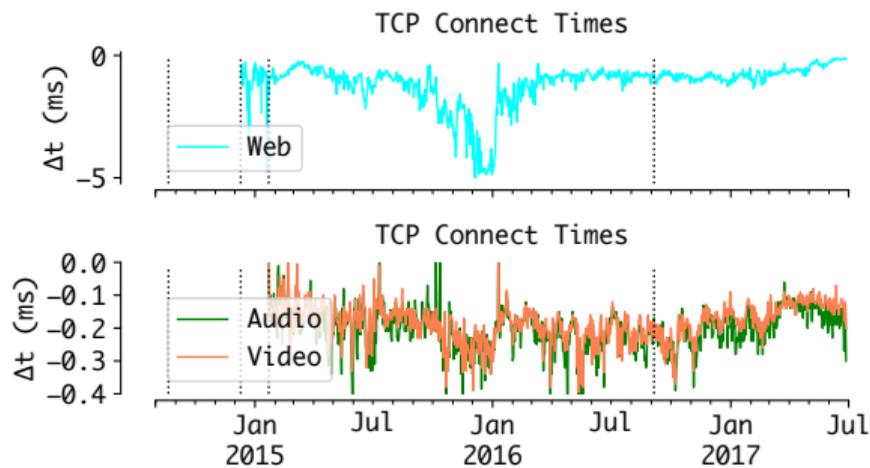

Throughput

Stall Events

Recommendations

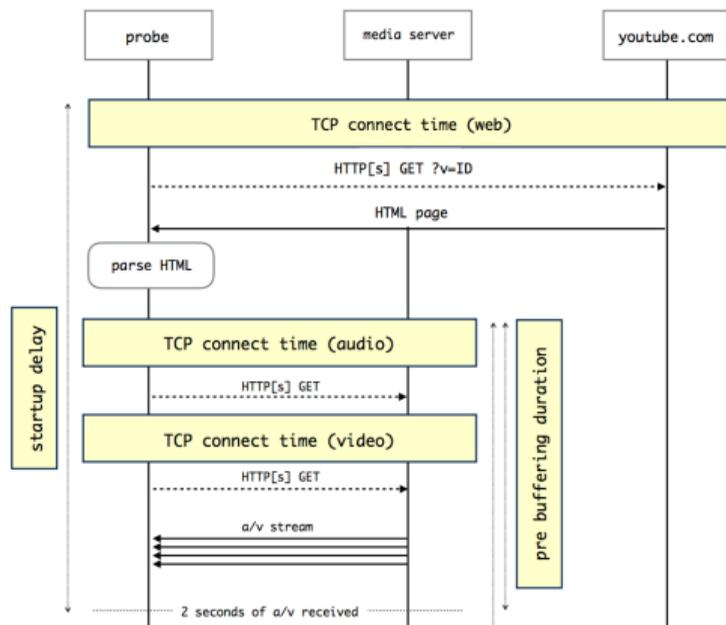

Q/A

TCP connect times

- ▶ TCP connect times consistently higher over IPv6 and have not improved over time.
- ▶ TCP connect times towards the webpage worse over IPv6 than towards media servers.

Recommendations

Q/A

Startup Delay

- ▶ 80% of the samples are slower over IPv6.
- ▶ Half of the samples are at least 100 ms slower over IPv6.

IPv6 Preference

TCP connect times

Startup Delay

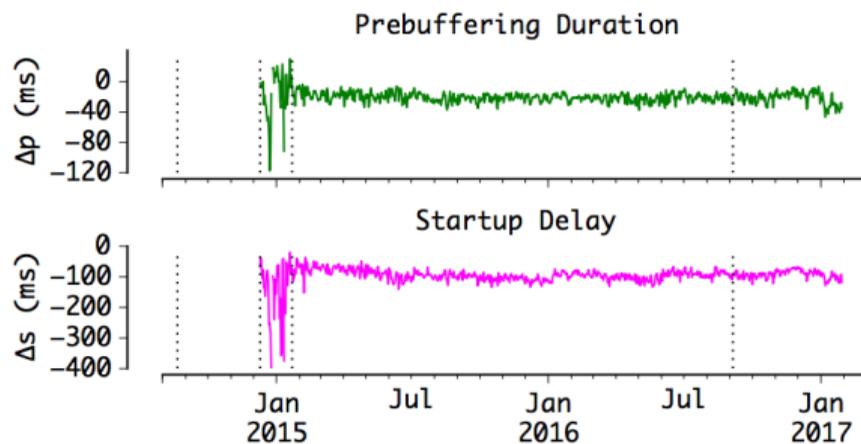

Throughput

Stall Events

Recommendations

Q/A

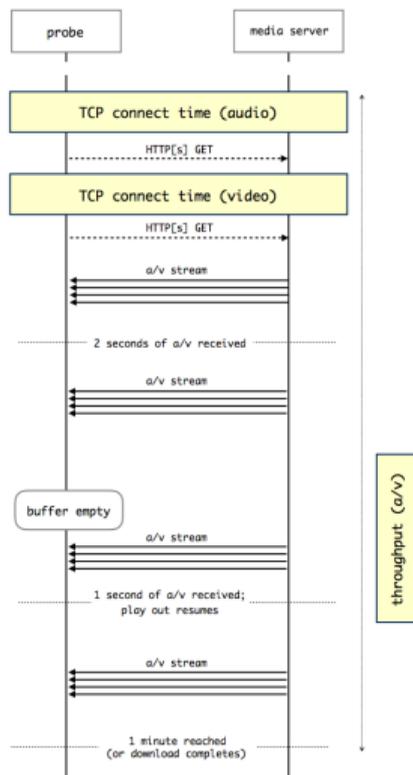

Startup Delay

- ▶ Prebuffering durations are ~ 25 ms higher over IPv6.
- ▶ Startup delays are ~ 100 ms higher over IPv6.
- ▶ Initial interaction with the web server makes startup delay worse over IPv6.

Stall Events

Recommendations

Q/A

Throughput

- ▶ 80% of video and 60% audio samples achieve lower throughput over IPv6.
- ▶ The throughput is consistently lower over IPv6, but it has improved over time.

IPv6 Preference

TCP connect times

Startup Delay

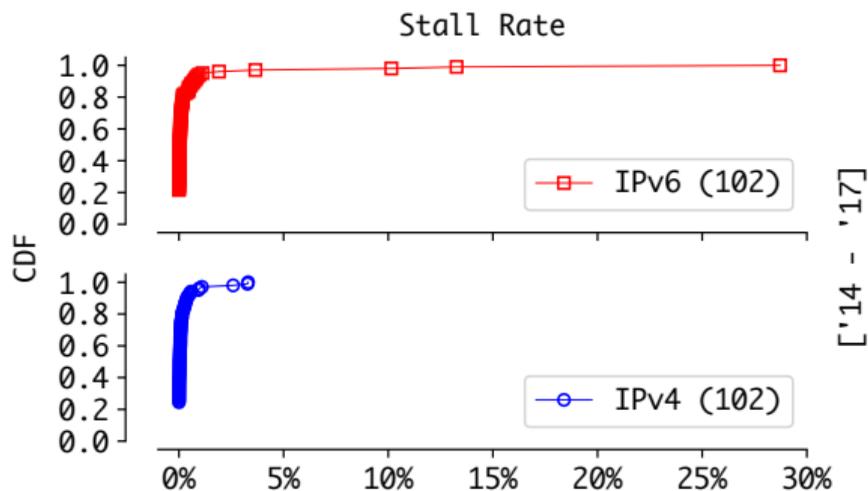

Throughput

Stall Events

Recommendations

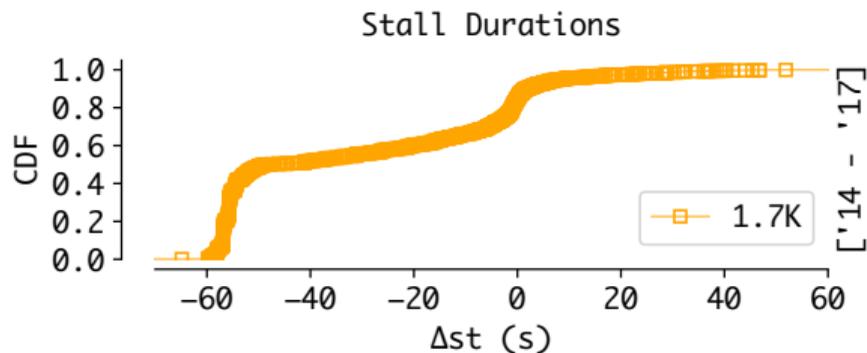

Q/A

Stall Rates

- ▶ 90% of the probes witness less than 1% stall rate over both address families.
- ▶ Bitrates reliably streamed is also comparable over both address families.

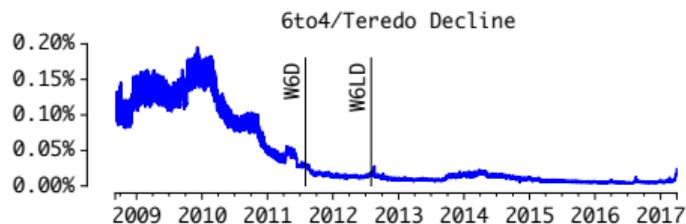

Stall Durations

- ▶ 80% of samples experience stall durations that are at least 1s longer.

Recommendations

- ▶ Update RFC 6555 with a lower HE timer value.
 - ▶ We have shown [6] that reducing HE timer value to 150 ms (from 300 ms) helps.

- ▶ ISPs should put latency as a first-class citizen.
- ▶ ISPs should ensure GGC nodes are dual-stacked.
 - ▶ Request an IPv6 prefix allocation from Google.

Q/A

Takeway

- ▶ Clients prefer streaming YouTube videos over IPv6.
- ▶ Observed performance (both in terms of latency and throughput) over IPv6 is worse.
- ▶ Stall rates are low, but when a stall occurs, stall durations over IPv6 are higher.
- ▶ Worse performance due to GGC nodes that are IPv4-only.

- ▶ Reproducibility Considerations:
 - ▶ The test is open-sourced: <https://github.com/sabyahsan/youtube-test>
 - ▶ The dataset is released: <https://github.com/vbajpai/2017-ccr-youtube-analysis>
